                                                                       FUNCTION: NUCLEOLIN IS THE MAJOR NUCLEOLAR PROTEIN OF GROWING EUXARYOTIC CELLS. IT IS FOUND ASSOCIATED WITH INTRANUCLEOLAR CHROMATIN AND PRERIBOSOMAL PARTICLES. IT INDUCES CHROMATIN DECONDENSATION BY BINDING TO HISTONE H1. IT IS THOUGHT TO PLAROLE IN PRE-RRNA TRANSCRIPTION AND RIPOSOME ASSEMBLY.

Dec R.C., Somenberg N., Burley S.K.;

"X-ray structure of the human hyperplastic discs protein: an ortholog of the C-terminal domain of poly(A)-binding protein.";

Proc. Natl. Acad. Sci. U.S. A. 98:4414-4419(2001).

-!- FUNCTION: E3 ubiquitin-protein ligase which accepts ubiquitin from an E2 ubiquitin-conjugating enzyme in the form of a thioester and then directly transfers the ubiquitin to targeted substrates (By similarity). This protein may be involved in maturation and/or post-transcriptional regulation of mRNA. May play a role in control of cell cycle progression. May have tumor suppressor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    O95071; O94970; Q9NPL3;

function. Regulates DNA topoisomerase II binding protein (TopE for the DNA damage response.
SUBCELLULAR IOCATION: Nuclear.
TISSUE SPECIFICITY: Widely expressed. Most abundant in testis expressed at high levels in brain, pituitary and kidney.
MISCELLANEOUS: A cysteine residue is required for ubiquitinthiolester formation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ဝှု

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is encoded by consensus PSi18 sequence derived from overlapping EST (expressed sequence tag) clones AAV82803-10. The clones were identified from a cDNA library made from prostate tumour tissue. Recombinant PSi18 protein is used to detect PSi18-specific antibodies, to raise antibodies for detection of PSi18 antigens, to screen for specific binding agents (potential therapeutics, and to isolate specific antibodies from serum. Detection of PSi18 protein or nucleic acid, which are prostate related, and altered or elevated in prostatic disease, is used for detection, diagnosis, staging, monitoring and prognosis of prostatic disease, particularly cancer, and to identify subjects at

                                                                                                                                                                                                                                                                                                                      The present invention relates to a number of prostate-specific sequences derived from the human PS118 gene. These can be used in the detection, monitoring and treatment of prostate diseases, particularly prostate cancer. The present sequence is a PS118 protein fragment of the invention. The coding sequences of the invention were isolated from a prostate tissue expressed sequence tag (EST) library.
                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel PS118 polypeptide for detecting, diagnosing, staging, monitoring, prognosticating, preventing, treating, or determining predisposition of individual to diseases and conditions of prostate, e.g. prostrate

benign prostatic
The present sequence is that of a human prostate-specific PS118 polypeptide, as predicted from a partial consensus cDNA sequence (see ABA91651), and lacking the N-terminal region. The PS118 consensus sequence is found at least 12 times more often in prostate than in non-prostate tissue. PS118 polypeptides, including derivatives of the present sequence, polymucleotides, antibodies, agonists and inhibitors are useful for detecting, diagnosing, staging, monitoring, prognosticating, preventing and
                                                                                                                               Detecting presence of target PS118 polynucleotide in test sample, useful for detecting, diagnosing, staging, monitoring, prognostit preventing or treating or determining predisposition to prostate disease -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 treating (including by genetic immunisation), or determining the predisposition of an individual to, diseases and conditions of the prostate, such as benign prostatic hyperplasia, prostatitis, prostatic intraepithelial neoplasia, prostate cancer, tumours and metastases. The PSI18 polypeptides can be produced by expression of PSI18 polynucleotides in transfected host cells. The methods and reagents of the invention may provide an early means of detecting diseases of the prostate and may also provide new markers which can differentiate between the clinically important and unimportant prostate cancers without the use of surgery.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence
